

Abzooba featured in Deloitte's 2020 Technology Fast 500™ List and Analytics India's Top Lists

Deloitte, for over 25 years, has ranked the fastest-growing technology, media, telecommunications, life sciences, and energy tech companies — both public and private — in North America in its Technology Fast 500™ list. We are extremely pleased to announce that Abzooba has been featured on this list, owing to its whopping 208% revenue growth from 2016 to 2019.

To be eligible on this list, Abzooba showcased its proprietary technology – xpresso.ai – which adds significantly to the company's operating revenues. Abzooba also had base-year operating revenues of more than \$US 50,000 and current-year operating revenues of at least \$US 5 million. Additionally, a company must be in business for a minimum of four years and be headquartered within North America.

In addition to the Technology Fast 500™ list, Analytics India Magazine recognized Abzooba, for the second consecutive year, as the "Seasoned Vendor" and one of the Top Data Science Service Providers in India, 2020 in its Penetration and Maturity (PeMa) Quadrant. Analytics India Magazine also recognized Abzooba as one of the 50 Best Firms In India For Data Scientists To Work For, 2021.

Abzooba's numerous success stories bear testimony to the fact that we have been part of successful digital transformations for various conglomerates as well as smaller subsidiaries.

For various US-based conglomerates, some of our notable achievements in the healthcare space are as follows:

- Analyzed ECG data scattered across fragmented data storages and accelerated processing huge volumes of image metadata by 70%.
- Implemented an incentive-based community health reward program that engages consumers beyond traditional outreach by leveraging SDOH factors.
- Created early intervention plans for effective cost savings by predicting the progression of comorbidities with 90% accuracy in members with T2DM, CKD, and ESRD.
- Predicted peak utilization for hospital beds, ICUs, and ventilators to understand the growth of cases. This enabled more efficient equipment procurement, capacity utilization, and alert systems that alerted members and local community about the availability or lack of facilities.
- Identified patients with high probability of readmission within 30 days of discharge, enhancing readmission rate reductions and personalized intervention plans.
- Reduced time to analyze physician and provider notes through better categorization of patient risk conditions.
- Improved patient experience by better analysis of patient sentiments and opinions from patient feedback forms.
- Increased completion rate of referrals and improve utilization through automation of end-to-end Tableau report generation.
